

# UPUTSTVO ZA PODEŠAVANJE UBIQUITY AIR GRID M5

Nakon što ste namontirali opremu i priključili je na vaš računar potrebno je da udjete u podešavanje Vaše mrežne kartice (*Start* → *Control Panel* → *Network Connections* → *Local Area Connection* → *Properties* → *Internet Protocol (TCP/IP)*), obeležite opciju *Use the following IP address*, pa u *IP address* upišite 192.168.1.45, u *Subnet mask* 255.255.255.0. Nakon što prihvatite nove parametre otvorite web browser (Internet Explorer, Mozilla, Opera), a zatim u *address* polju upišite 192.168.1.20, nakon toga pojaviće se *log in* prozor (Slika 1) i u traženim poljima upišite za *user*: ubnt i za *password*: ubnt.

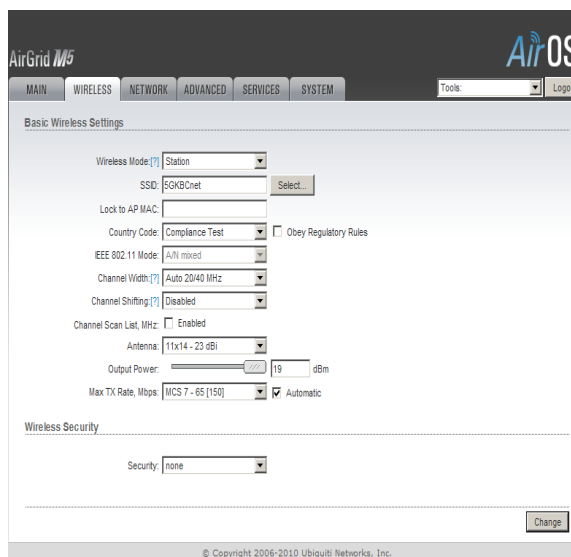

Slika 1

Posle uspešno unesenih parametara dobićete prozor kao na Slici 2.

Slika 2

Slika 3

Zatim odaberete *Wireless* (Slika 3) i u polju *Wireless Mode* odaberite *Station*, u *Country Code* postavite opciju *Compliance Test* zatim odaberite opciju *Select...* i dobićete prozor kao na Slici 4.

Select Scan Close this window

Slika 4

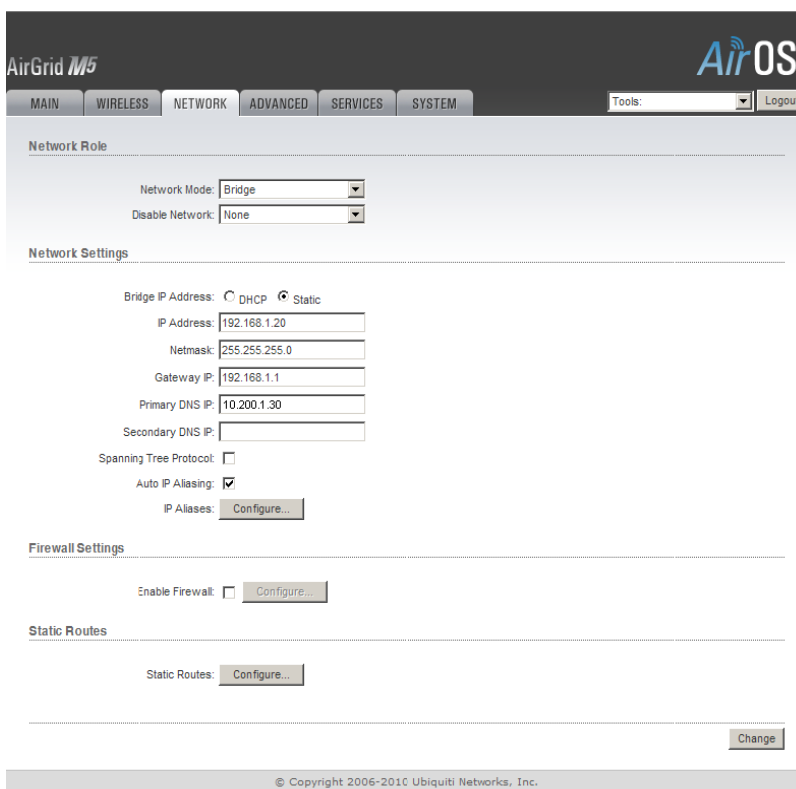

Nakon toga pritisnite opciju **Scan** i dobićete spisak svih signala koji se vide u Vašoj okolini. Obeležite naš kanal koji vidite sa najjačim signalom, a zatim pritisnite **Select**. Po završetku kliknite na **Close this window**. Na dnu stranice kliknite na **Change**, a zatim na **Apply** u samom vrhu stranice, nakon toga uređaj je povezan na mrežu.

Potom odaberite **Network** (Slika 5) i podesite **Network Mode**, koji može biti **Bridge** ili **Router**.

## Podešavanje Bridge moda

(uređaj omogućava da se koristi više zasebnih korisničkih naloga)

U polju **Network mode** odaberite **Bridge**, pa na dnu stranice kliknite na **Change**, a zatim na **Apply** u samom vrhu stranice. Zatim je potrebno da se na mrežnoj kartici (*Start* → *Control Panel* → *Network Connections* → *Local Area Connection* → *Properties* → *Internet Protocol (TCP/IP)*), obeleži opcija **Obtain an IP address automatically** i **Obtain DNS server address automatically**. Kada to potvrdite, kreirajte **PPPOE** konekciju na Vašem računaru i time su podešavanja završena.

The screenshot displays the 'Network Settings' page for an AirGrid M5 device running AirOS. The 'Network Role' section shows 'Network Mode' set to 'Bridge' and 'Disable Network' set to 'None'. Under 'Network Settings', 'Bridge IP Address' is set to 'Static' with a value of '192.168.1.20'. Other fields include 'Netmask: 255.255.255.0', 'Gateway IP: 192.168.1.1', 'Primary DNS IP: 10.200.1.30', and 'Secondary DNS IP'. The 'Spanning Tree Protocol' is unchecked, and 'Auto IP Aliasing' is checked. There are 'Configure...' buttons for 'IP Aliases', 'Firewall Settings', and 'Static Routes'. A 'Change' button is located at the bottom right of the settings area. The footer contains the copyright notice: '© Copyright 2006-2010 Ubiquiti Networks, Inc.'

Slika 5

## Podešavanje Router moda (uređaj jednu konekciju deli na više računara)

U polju **Network mode** odaberite **Router**. U **WLAN NETWORK SETTINGS** pod opcijom **WLAN IP Address** odaberite **PPPoE**, u polju **PPPoE Username** upišite Vaše korisničko ime, u polju **PPPoE Password** upišite Vašu lozinku, u **PPPoE MTU/MRU** upišite **1480/1480**. Zatim je potrebno da pod **LAN NETWORK SETTINGS** u **IP Address** unesete 192.168.1.20 i u **Netmask** 255.255.255.0, potom štiklirajte opcije **Enable NAT** i **Enable DHCP Server**. Takođe u **Range Start** bi trebalo da unesete 192.168.1.100, a u **Range End** 192.168.1.200, pa na dnu stranice kliknite na **Change**, a zatim na **Apply** u samom vrhu stranice. Na kraju je potrebno da se na mrežnoj kartici (*Start* → *Control Panel* → *Network Connections* → *Local Area Connection* → *Properties* → *Internet Protocol (TCP/IP)*), obeleži opcija **Obtain an IP address automatically** i **Obtain DNS server address automatically**. Kada to potvrdite kompletirali ste podešavanja i možete da koristite Internet.

The screenshot displays the AirOS configuration web interface. At the top, there are navigation tabs: MAIN, WIRELESS, NETWORK, ADVANCED, SERVICES, and SYSTEM. The 'NETWORK' tab is selected. The 'Network Role' section shows 'Network Mode' set to 'Router' and 'Disable Network' set to 'None'. Below this is the 'WLAN Network Settings' section, where 'WLAN IP Address' is set to 'PPPoE'. The 'PPPoE Username' field contains 'Korisničko ime' and the 'PPPoE Password' field contains 'Vaša šifra'. The 'PPPoE MTU/MRU' is set to '1480/1480'. In the 'LAN Network Settings' section, the 'IP Address' is '192.168.1.20' and the 'Netmask' is '255.255.255.0'. The 'Enable NAT' checkbox is checked, and the 'Enable DHCP Server' checkbox is also checked. The 'Range Start' is '192.168.1.100' and the 'Range End' is '192.168.1.200'. The 'Lease Time' is set to '3600' seconds. At the bottom of the page, there is a 'Change' button.
